EDUCATION

Rochester Institute of Technology (Rochester, NY)

August 2024 - Present

Bachelor of Science, Software Engineering

Anticipated May 2029

- Recipient of Founders Scholarship for exceptional academic achievement
- Selected Classes: Engineering of Software Subsystems, Analysis of Algorithms, Web Engineering, Software Project Management, System Requirements & Architecture, Engineering Secure Software

TECHNICAL SKILLS

Languages

Python | Java | C++ | C# | SQL | PHP | Javascript | Typescript | Lua | HTML & CSS

Tools & Technology

React | React Native | Expo | Flask-RESTful | Unity | Angular | Roblox Dev Studio

PROFESSIONAL EXPERIENCE

Software Engineer Intern

June 2026 - Present

Lancaster Farm Fresh Cooperative

- Developed and published a cross-platform **React Native** mobile app to the App Store and Google Play, streamlining wholesale ordering for regional business partners.
- Engineered a dynamic search and live inventory module in TypeScript, enabling sub-second query performance across a database of 5,000+ active product SKUs.
- Built order history and tracking features enabling buyers to review and reorder past purchases from a rolling 14 day transaction window.
- Constructed custom **PHP REST** endpoints & authentication pipelines utilizing password hashing, session tokens, and persistent storage to securely handle transactions and user states.

PROJECTS

Carbox

March 2026 - Present

- Developed a car search application using React and Python that dealerships can adopt to let their customers browse vehicle inventory dynamically by filtering specifications..
- Utilized PostgreSQL database and Flask RESTful API to manage communication between frontend and backend.
- Followed version control practices using Git to manage code changes and feature development.

Swing

January 2025 - Present

- Adventure game developed on the Roblox Developer Studio platform where users defeat enemies and other players in order to collect the best inventory of fantasy weapons.
- Developed a Mob Pathfinding system capable of traversing complex environments.
- Created & managed databases consisting of account information for player quest and inventory persistence.
- Established a system of deterministic randomness to synchronize events across each server.
- Modeled game assets consisting of weapons, foliage, trees, buildings, and items using Blender

INTERESTS

German

May 2023 - Present

- German conversational proficiency, now pursuing as an immersion at Rochester Institute of Technology.
- Recipient of the 2024 National Goldurkunde Award.
